1 create a latex document from lisp

in this document we show how to create an entire latex document from lisp. it is recommended to use org-mode instead.

2 Using strings

Strings can be used if you prefer, and if you want to use commas and have case-sensitivity. Perhaps it is more convenient not to use tex-eval-list on the entire document, but only on the important parts.

$$1 + 1 = 2, \tag{1}$$
